

Project Name Logistics Control Tower

THE CLIENT

A logistics company who is one of the three contract logistics service providers with presence over 90+ locations and manage above 6 million square feet of warehousing space.

INDUSTRY

Warehousing and Distribution Logistics Services

CLIENT REQUIREMENT

Our client needed a solution to gather, monitor and process real time data at Control Tower at one location which could offer supply chain restructuring, transformation & optimization through data analysis, and process automation.

SOLUTION OFFERED

We have provided our DS4000 Controller solution with the configuration of four input and eight output ports, where several workstations can be connected to the input ports and output ports can be used for displaying the content on the video wall. We have also provided Canvas Wall Management software with our controller using which they can create multiple sources, place them on the wall, save layouts, stream content from their mobile, annotate on live content and collaboration features.

OUTCOME

Our client is satisfied with our videowall solution as using this new offering, they can provide its customers across the country with centralized transportation control tower services that offer end-to-end visibility, real-time performance reporting through various Business Intelligence dashboards.
